

## State Treasury Debt

### Monthly newsletter

Warsaw, 4 March 2013

## December 2012

At the end of December 2012 State Treasury (ST) debt amounted to PLN **793,853.1** million (about EUR 194.2bn / USD 256.1bn, with exchange rate of December 31, 2012: 1 EUR = 4.0882 PLN, 1 USD = 3.0996 PLN).

In comparison with November 2012 ST debt decreased by PLN 7,236.7 million (0.9%). From December 2011 to December 2012 ST debt increased by PLN 22,725.6 million (2.9%).

Table 1 presents factors affecting change in ST debt. An increase in debt in 2012 was mostly a net result of financing the state budget borrowing requirements (increase of debt by PLN 37.6 bn) and strengthening of Polish zloty (decrease of debt by PLN 21.3 bn). The decrease of debt in December 2012 was mainly connected with decrease of funds on the state budget account.

Tables 2 and 3 present – respectively – the breakdown of ST debt by instrument and by holder.

**Table 1. Factors affecting change in the State Treasury debt (PLN billion)<sup>1)</sup>**

	Dec 2012 -Nov 2012	Dec 2012 - Dec 2011

The share of foreign debt in total State Treasury debt decreased from 32.0% at the end of 2011 to 31.6% at the end of December 2012.

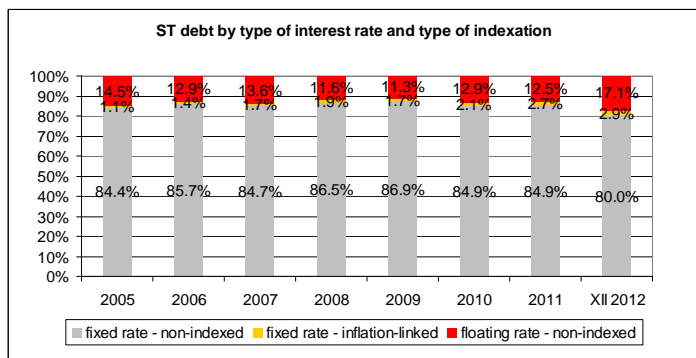

Between December 2008 and December 2012 the share of foreign investors (non-residents) in the State Treasury debt increased from 34.4% to 54.5%.

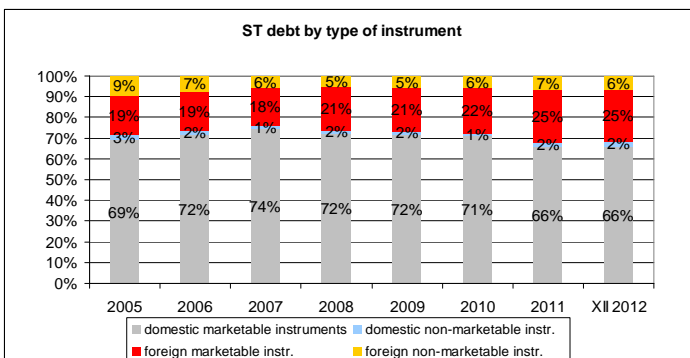

The most significant group of creditors (with the share in domestic debt of about 48%) is the domestic non-banking sector (primarily non-banking financial institutions).

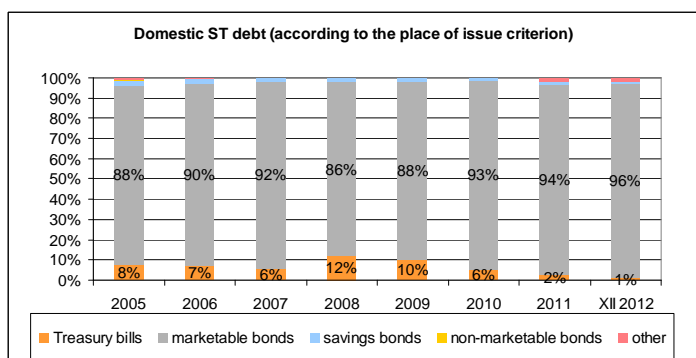

The share of foreign investors in the domestic debt increased from 29.4% at the end of 2011 to 35.1% at the end of December 2012.

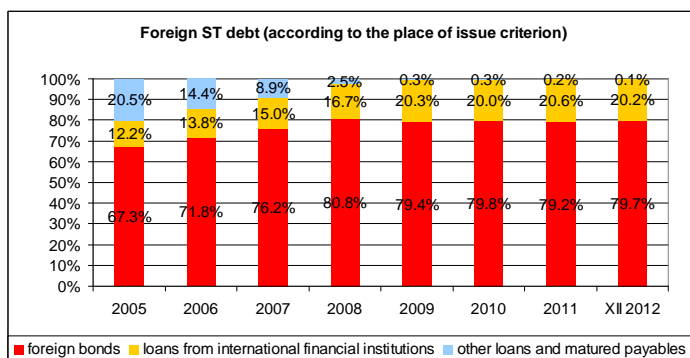

The vast majority of State Treasury debt is fixed-rate (82.9%), mostly non-indexed (fixed-income) instruments.

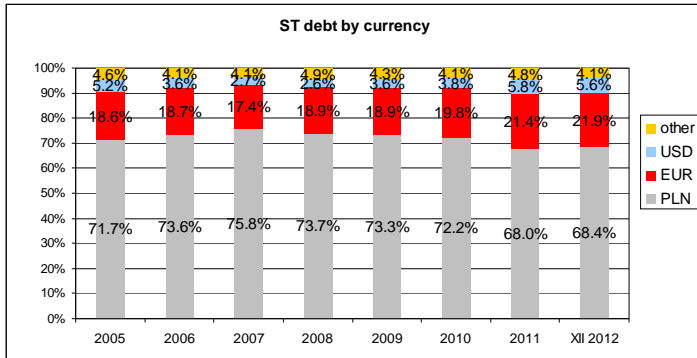

Non-marketable instruments, that collectively account for 9% of the State Treasury debt, include mainly foreign loans, deposits and savings bonds.

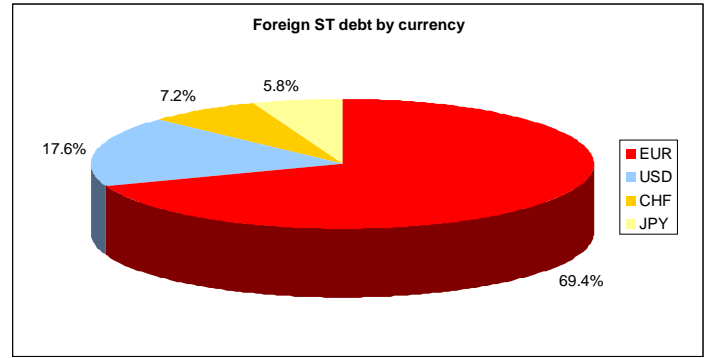

Marketable bonds are the vast majority (95.8%) of domestic debt. The share of Treasury bills decreased from 12.0% at the end of 2008 to 1.1% in December 2012.

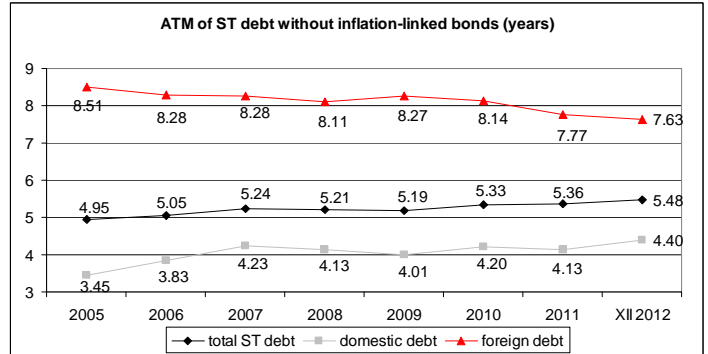

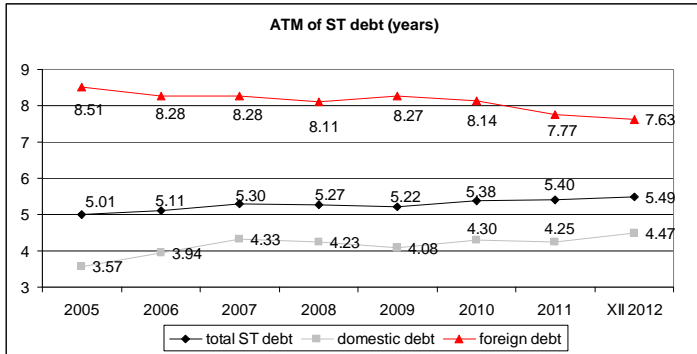

International bonds (79.7%) and loans from international financial institutions (20.2%) collectively account for 99.9% of foreign debt.

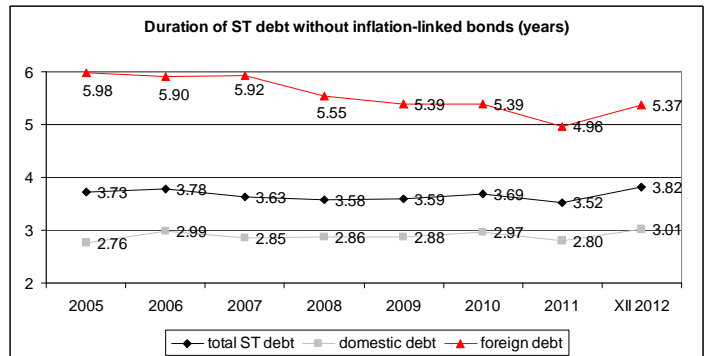

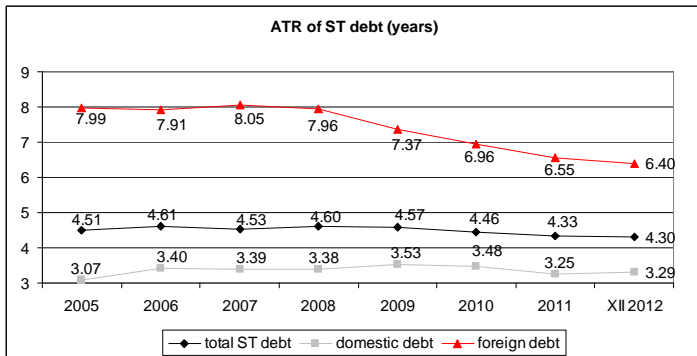

About 68% of State Treasury debt is denominated in Polish zloty. 21.9% of State Treasury debt is denominated in euro.

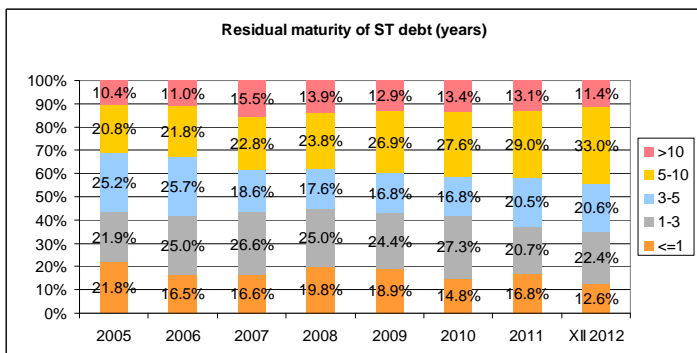

Almost 70% of foreign debt is denominated in euro.

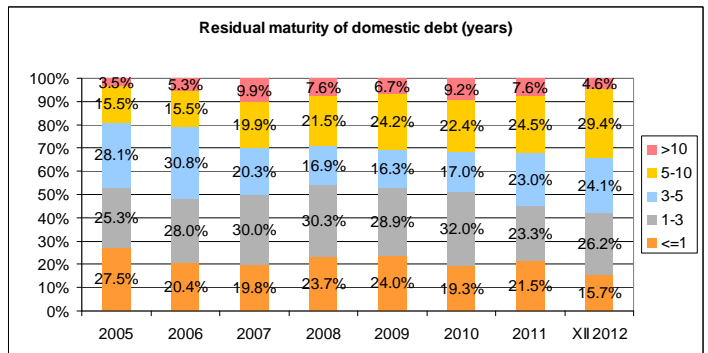

In 2012 the **refinancing risk** of State Treasury debt was reduced: average term to maturity (ATM) of State Treasury debt increased from 5.40 years to 5.49 years. In the same period ATM of domestic debt increased from 4.25 years to 4.47 years. ATM excluding inflation-linked bonds is currently close to ATM that includes inflation-linked bonds.

Average time to re-fixing (ATR) of State Treasury debt remained almost unchanged in 2012 (decrease by 0.03 years). This indicates a stable level of **interest rate risk**. In the same period duration of domestic debt increased from 2.80 years to 3.01 years while duration of State Treasury debt increased from 3.52 years to 3.82 years. The main reason of duration increase was interest rate decrease on foreign markets.

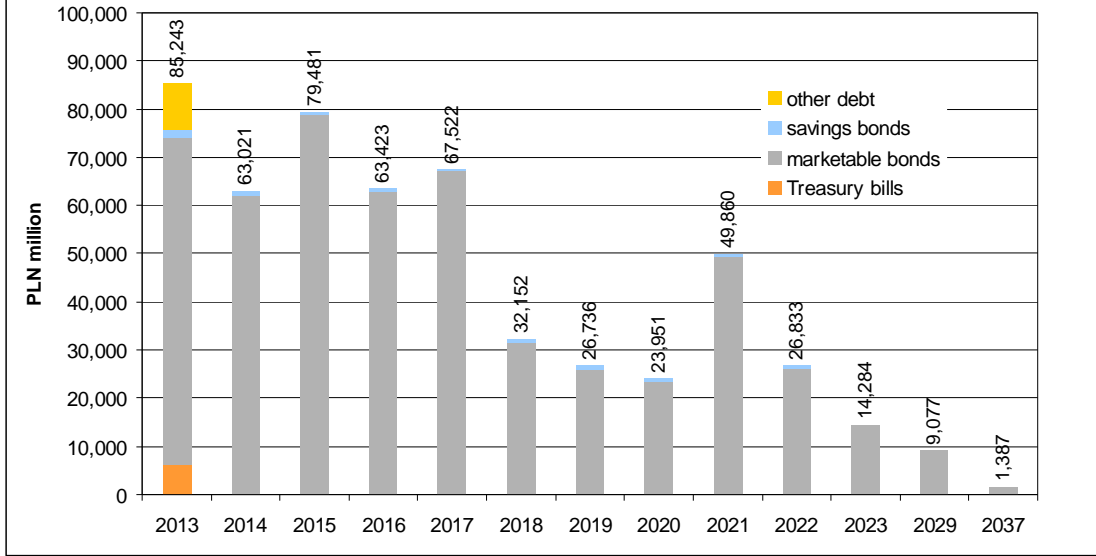

Debt with residual maturity of up to 3 years accounted for 35.0% of State Treasury debt (37.5% at the end of 2011) while debt with residual maturity of up to 1 year accounted for 12.6% of State Treasury debt.

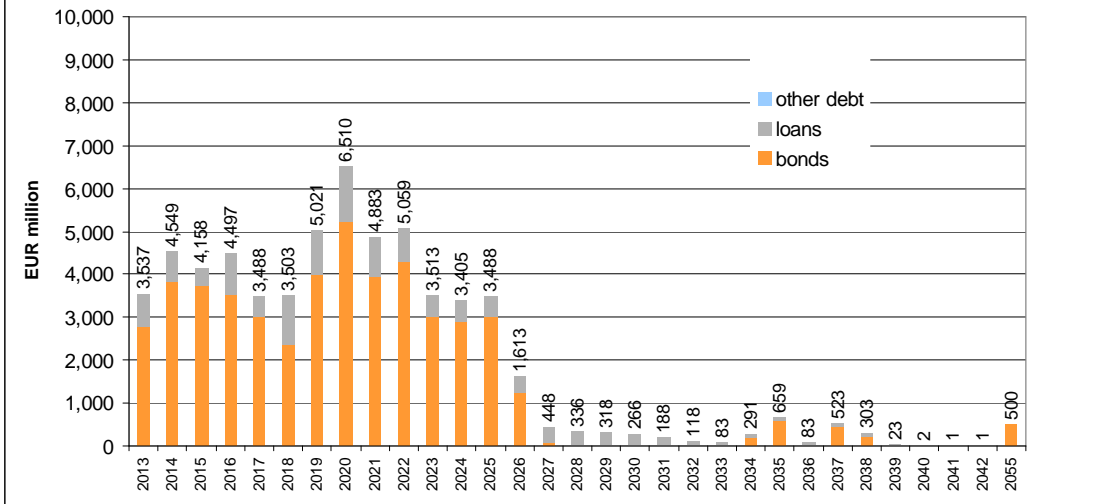

Debt with residual maturity of up to 3 years accounted for 41.9% of domestic debt (44.8% at the end of 2011) while debt with residual maturity of up to 1 year accounted for 15.7% of domestic debt.

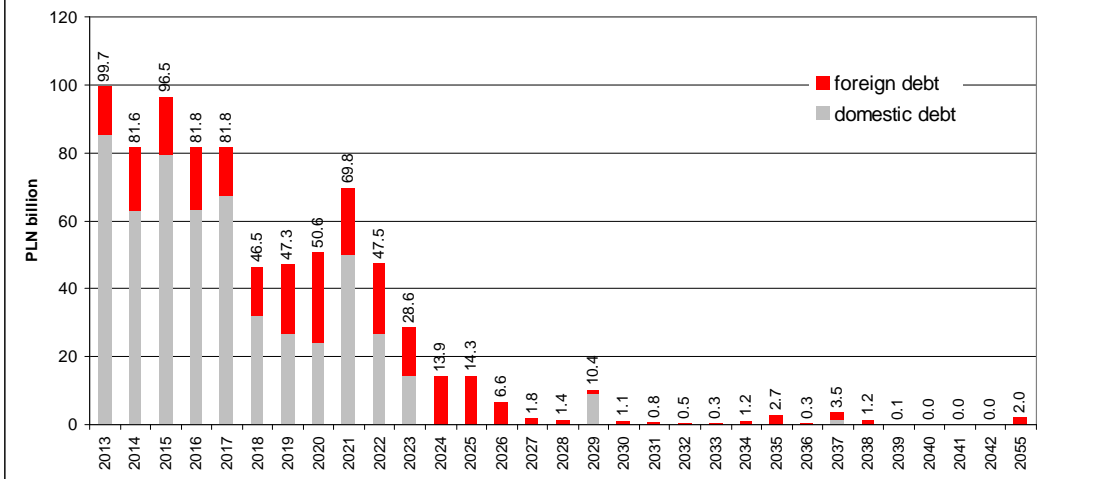

**Maturity profile of domestic debt as at the end of December 2012**

**Maturity profile of foreign debt as at the end of December 2012**

**Maturity profile of ST debt as at the end of December 2012**
